

Mission Perfection

industrial plastics and sealing parts

A Promise

Plastoseal Produktions GmbH was established in February 2005. From the outset, its mission was 'for the client to be the focus and to make the impossible possible'.

At the time, the owner had nearly 15 years of experience at the forefront of the field of sealing and plastic technology in various companies.

Plastoseal guarantees the greatest possible know-how, the highest quality by certification in accordance with ISO 9001, immediate help and advice for customers, the best price-performance ratio with TOP quality and adherence to schedules and timely delivery

PLASTOSEAL will therefore always try to make the impossible possible and we will make every effort to find a quick and efficient solution to your problems.

Quality made in Austria

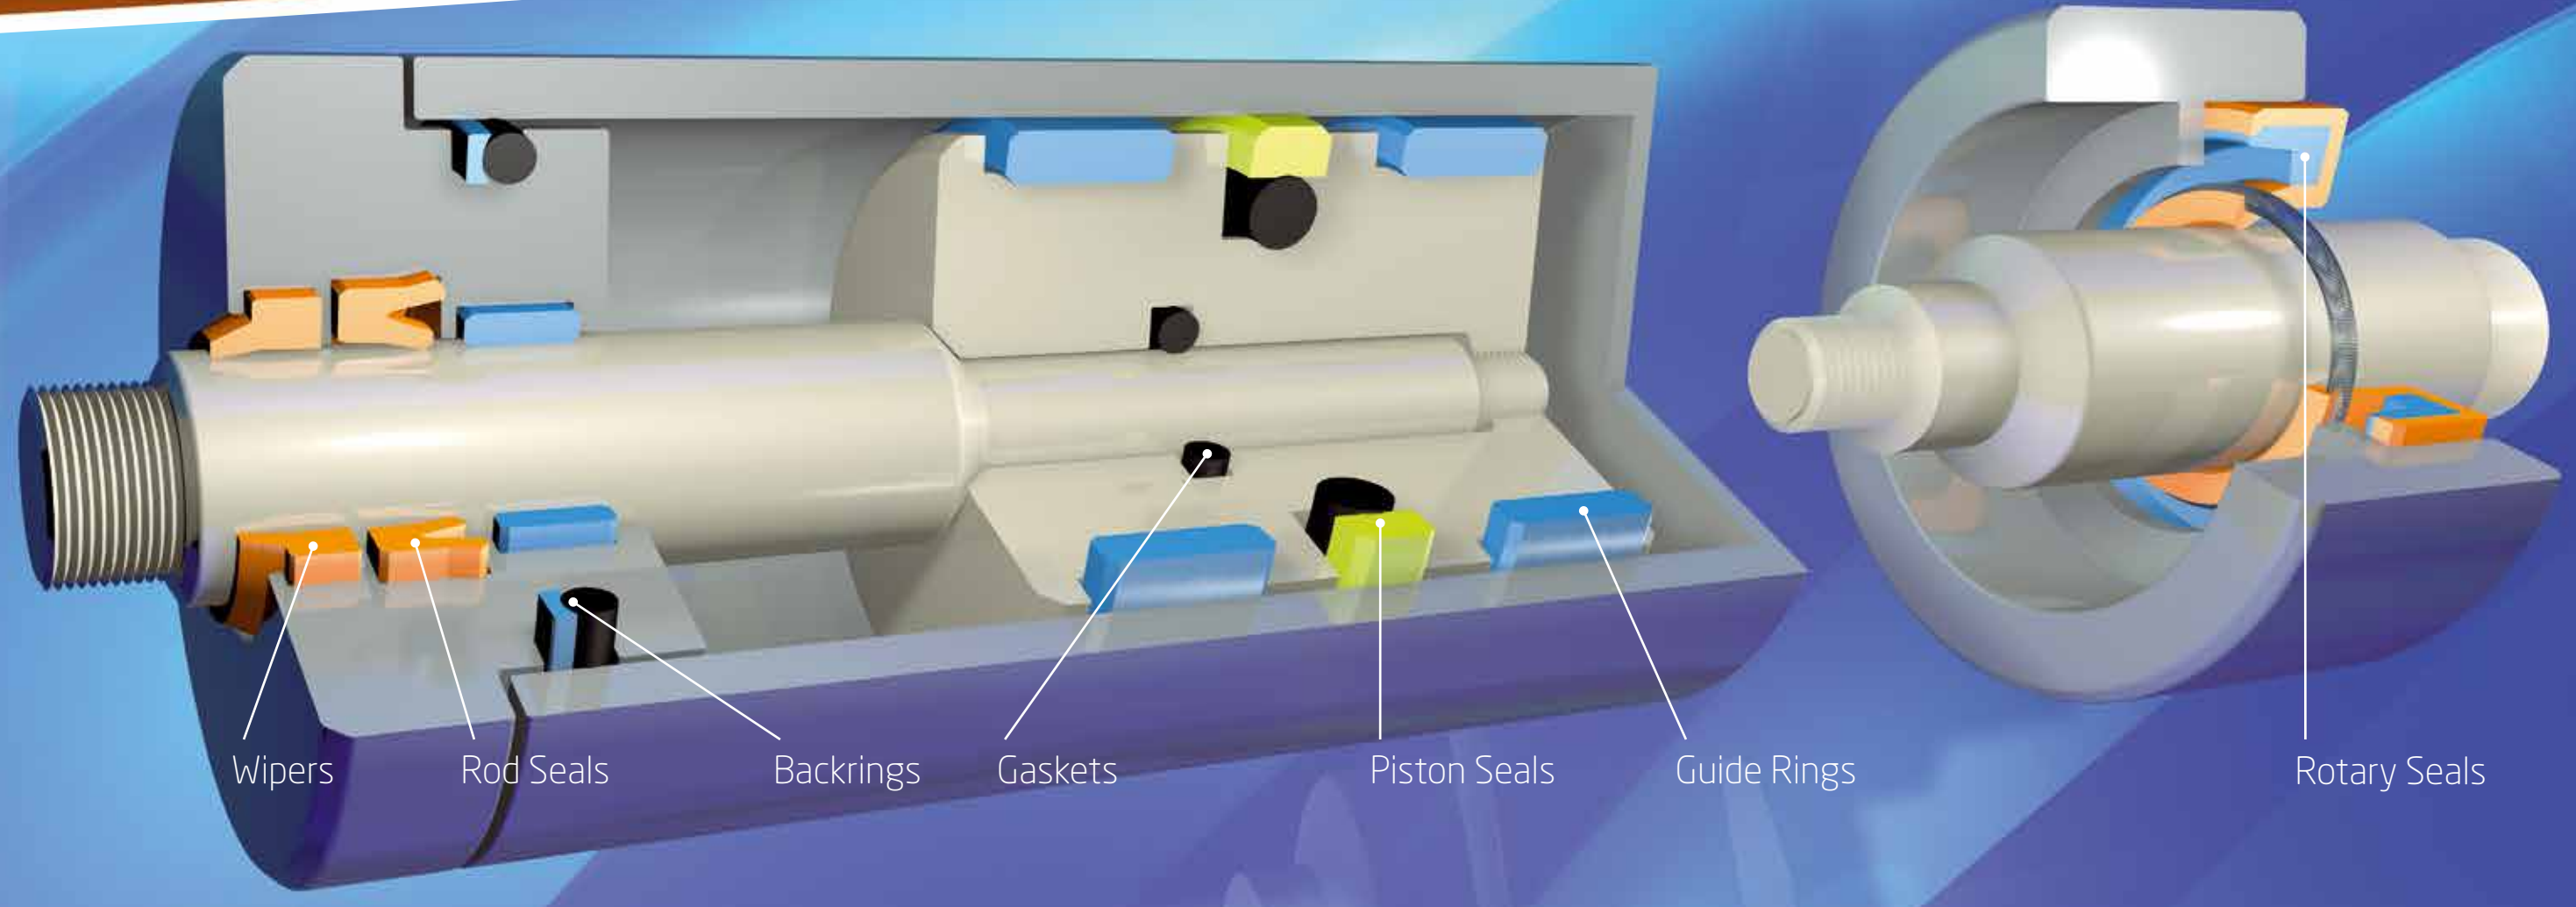

The city of Leoben is located in the heart of Styria and is home to many international high-tech companies. The production of high-quality lathe-cut seal technology is particularly well known and has its origins here.

For over 30 years, there has been a constructive exchange of experience between the University of Leoben and technical colleges. This exchange allows us to gain access to the latest research in plastics technology.

Our machinery is designed and built entirely in Austria. These production systems are considered to be the best in the world – not least because we maintain a lively dialogue with the manufacturers.

The result is unrivalled quality from Austria!

We think Sealing Technology

Production of elastic and plastic components for all industry sectors, even motor racing technology. These are manufactured using specially developed machine centres in a flexible manner, independently of dimensions.

Regardless of whether an individual item, sample production a small or large series or the manufacture of prototypes which Plastoseal develops together with the customer are required. Almost ANYTHING is possible - from the smallest miniature component (diameter 1mm) to a large seal (currently with a diameter of 2500mm).
